

VeriFone® in partnership with Success Systems® announces...

POS Data Conversion Tool

Put to work the new POS terminal right away! Success Systems offers a Data Conversion Tool (PDCT) that will allow VeriFone Authorized Certified Service (VASC) technicians to electronically convert the store's current price book on a GSITE register into the store's new VeriFone terminal.

The conversion tool is a profit center that will save hours and hours of POS set up. It will pay for itself in time saved, avoiding re-keying the price book.

How it works

The PDCT will import the store's price book data to secure servers, check the UPCs for accuracy, and convert the data to the VeriFone POS format. Then, PDCT will send the price book to the new VeriFone POS terminal in no time. The store will be up and scanning, using the original price book, in under an hour.

Benefits

Faster Time To Market

Avoiding manual migration of POS data can save significant time and money. Our Data Conversion tool assists by rapidly migrating POS data through an automated and reliable process. The store's prices, items and descriptions will be electronically transferred via the Internet into the new VeriFone terminal.

Hot Market and a New Profit Center

Add another revenue center to your POS upgrade package. With upwards of 20,000 GSITE terminals expected to be replaced in the next few months. This is an excellent time to offer a unique competitive advantage over competitors POS offerings.

Second chance to get it right

The reliability of POS scanning prices depends on the corresponding data quality. Success Systems POS Data Conversion tool ensures more reliable scanning sales by validating the data before its use at the store. The Data Conversion tool comes with a **free** 15-day license of our web based back office solution: ePB Lite™, which allows users to review, edit and add prices, items and departments from any PC with Internet access.
